

Getting started at home

Getting started at home:

- Wear loose, comfortable clothing and supportive footwear
- Clear a space in the room
- Have your exercise equipment and activity tracker

How should I feel during exercise?

- Assess your exertion level with the RPE score
- It is normal to:
 - Feel slightly sweaty, warm or flushed
 - Be breathing somewhat deeper and faster but still be able to talk
 - Feel your heart beating faster
- Slow down or take a brief break if:
 - Your breathing is uncomfortable
 - You are sweating excessively
 - Your perceived exertion score is higher than recommended

- **STOP** exercising if:
 - You feel dizzy
 - You have chest pain
 - Your heart beat becomes irregular
 - You are very short of breath
- What to do if you have chest pain, tightness or discomfort:
 - STOP what you are doing and sit down
 - If your discomfort does not resolve quickly you can take one nitroglycerin every 5 minutes
 - If after taking 3 nitroglycerin you continue to have chest discomfort call 9-1-1

If you have any abnormal symptoms during your exercise session, notify the cardiac rehab team at **814.689.3140** before attempting another exercise session.
