MISSION: We are here to make people healthier

VISION: To become the most trusted source of healthcare for Central Pennsylvanians.

FOUR PRIORITIES:

Localized Care: Broaden Mount Nittany Health’s scope of services in order to provide more comprehensive care, locally – maximizing our leadership position in Centre County and its surrounding communities.

Integrated Care: Create a seamless, patient-centered continuum of care across the Mount Nittany Health delivery system.

Efficient Care: Become the recognized leader in the delivery of efficient, appropriate, high-quality care – through the elimination of waste, cost-management and restructuring, and the acquisition of health informatics to measure and demonstrate value to patients and payers.

Aligned Care: Expand and maximize strategic partnerships to accommodate an increase of scale, scope, and competencies.
Form a partnership with PSU, Hershey and PSU College of Medicine to:
- Develop the regional medical campus, including residency programs for the training of new physicians to help ensure the future supply of primary care physicians in Centre County.
- Implement strategies for healthcare cost management for our covered lives populations, including the exploration of a primary care model and health plan.

Enhance the scope of services available locally via the co-recruitment of physicians:
- Primary care
- Oncology
- Seek synergies in tertiary care services
- Maximize purchasing opportunities wherever possible
- Explore opportunities for efficiencies and seamlessness of information sharing, connecting to a broader system of care.

Develop a new care delivery model for adult primary care, designed to better manage a population of patients – a model that accommodates for, and supports:
- Care management for chronic disease states
- Demonstration of quality outcomes and cost containment

Develop a strategy for pediatric care to enhance access to pediatric subspecialties locally, identify solutions for expanding emergency services, and alignment with an inpatient children's hospital in order to offer a complete continuum of care.

Develop surgical- and intensive care-coverage to more appropriately accommodate surgical cases locally and eliminate the need for frequent transfers from Mount Nittany Medical Center's ED.

Develop a tertiary care and trauma services strategy to maximize the clinical value chain of a tertiary care provider – extending additional services locally and simultaneously creating efficiencies for patient transfers.

Implement a formalized clinical service line approach that spans the continuum of care.

Execute an ambulatory strategy designed to move select hospice and outpatient services out of the high-rent hospital facility and into the communities that we serve.

Develop an information systems strategy as an organizational competency to move accurate, real time information across the continuum of care, providing clinical and business decision support across the health system for its clinical providers and partners, and administration. One patient, one record.

Explore the development of health plan to serve Mount Nittany Health covered lives, as well as Penn State's insured population – creating a proactive solution to manage the cost and quality of these populations in a post-reform environment.

Legend
- Localized Care
- Integrated Care
- Efficient Care
- Aligned Care
OUR PLAN WILL:

• Secure market essentiality
• Earn trust from our payers and patients
• Deliver value in the form of quality & price
